EDUCATION

ABES ENGINEERING COLLEGE
BTECH IN COMPUTER SCIENCE
ENGINEERING
Expected July 2025

SKILLS

PROGRAMMING

Over 2000+ lines:

Golang • Java • Spring • Spring boot

Over 1000+ lines:

JavaScript • React • Servlet • JSP

Over 500 lines:

C/C++ • Unix Tools and Scripting • CSS

Over 200 lines:

Nginx • Shell • JUnit

TOOLS AND UTILITIES:

Jenkins • Kubernetes • Prometheus
• Linux • Docker • Docker Compose •
Helm • Maven

DATABASES:

Postgres • MongoDB • MySQL

VOLUNTEERING

- Google Summer of Code'23 Mentee at Jenkins
- Google Summer of Code'24 Mentor at Jenkins
- President @ GeeksforGeeks ABESEC Student Chapter
- Founding Member of *Elixir Tech Community*
- SIG Docs Member @JenkinsCI
- Lead the student chapter of 40+ students and built a community of 2500+ Students.
- Also Organized multiple events around Open source and mentored students looking for mentorship.

CERTIFICATES

- Google Summer of Code Completion Certificate

EXPERIENCE

RAPIDFORT INC. | SOFTWARE DEVELOPMENT CONSULTANT
JUNE 2024 - PRESENT

- Working on Securing Docker images by reducing their attack surface.
- Wrote scripts to automate the manual porting of code with different file structure to use GitLab pipelines

JENKINS AUTOMATION SERVER | GOOGLE SUMMER OF CODE
2023

MAY 2023 - SEPTEMBER 2023

- Written industry grade code to migrate the existing Documentation Site to a versioned alternative that is used by around approximately 11M+ developers who use Jenkins for CI.
- Contributed code in Jenkins-infra where I learned about Helm, CI/CD Pipelines and Cloud Native technologies.

JENKINSCI | OPENSOURCE CONTRIBUTOR

July 2022 – Present

- Used my knowledge of Java in modernizing the plugins.
- Modernized multiple plugins extensively used by Developers with Jenkins for CI/CD pipelines.
- Collaborated with maintainers of some plugins on adding new features to plugins.

PROJECTS

USING ALTERNATIVE TOOLS TO BUILD JENKINS.IO | GITHUB

Web development , Full stack

- I used Gatsby JS with Antora for both the site. It was a complete rewrite against the previous site built with Ruby and HAML.
- The new site hosted versioned documentation and complete decoupled Blog site.

DOCKERIUM | GITHUB

Golang, Unix namespaces, Chroot, Containerisation, Docker API

- Implemented containers from scratch making use of Unix Namespaces, Unix system calls like unshare, clone.
- Learned about Docker container internals and 'reexec' package in Docker, which is used to execute system calls in name spaced shell.
- Integrated Docker API V2 for pulling images and starting them up in container.

GOLOADBALANCER | GITHUB

Backend, Load Balancing Algorithms

- Distributes HTTP requests evenly across backend servers using a round-robin algorithm.
- Periodically checks server health and temporarily removes unresponsive servers.
- Handles concurrent requests, stopping and resuming traffic based on server health.

REALTIME CHAT APPLICATION | GITHUB

Websockets , Golang

- Implemented Authentication, Clean architecture, Cookie based JWT using Postgres as Database.
- Used web sockets to implement real-time chat with room management for users.
- For frontend, I used Next.js, React and Tailwind CSS
